PROFILE

A Full-Stack Developer with a strong focus on backend/frontend development and database design. I'm good in creating efficient database structures, managing migrations, and building robust server-side logic. Equally confident in frontend development, I create dynamic and responsive user interfaces to deliver good user experiences. Being proficient in TypeScript, I have good knowledge of its type-safe programming structure to write clean, maintainable, and scalable code. Currently I'm a Bachelor of Science in Computer Science at the University of the People, I continuously expand my skill set and stay updated with the latest industry trends to drive impactful results.

WORK EXPERIENCE

Full-Stack Web Developer

MyanCare Telemedicine   2022-Present

- Migrated deprecated VoIP Service into new integration for in app voice/video communication in MyanCare.
- Implemented Call Feedback Rating system in MyanCare appointment calls.
